

**Features:**

This volunteer-run garden park contains the largest collection of Tasmanian species in cultivation. Focused on long-lived species, the Arboretum has all Tasmanian conifers and all the State's eucalypts. All plants are labelled. A list of species in each bed of the Tasmanian Section is available.

The Gondwana section contains a large number of Southern Hemisphere *Nothofagus* species and a range of *Eucryphia* species (Leatherwood). The Wollemi pine (*Wollemia nobilis*) grove is another highlight. Other sections contain representative plants from other continents.
